Critical Review: Exploring Interactions with Physically Dynamic Bar Charts

Introduction

Studies investigating how data can be effectively presented to, explored and interpreted by users forms the core part of Information Visualisation ('InfoVis') to support users in the decision-making process. This review summarises and critical analyses Taher et al. [2015] whose paper explores the use of physically dynamic bar chart as a device for exploring user interactions with visualisations of data, to determine future work in this domain of Information Visualisation.

Summary of Contributions

...

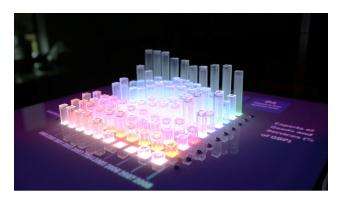

Figure 1: EMERGE: Exploring Interactions with Physically Dynamic Bar Charts using actuating physical rods and RGB LEDs to display international export data.

Task Overview **Interaction Techniques** Annotation Selecting and marking Point, pull, press. (Process & individual data points. provenance) Filtering (Data Hiding and refining Swipe away, manual press, view & data for enhanced assisted press, press shortcut, perception and and press to compare. specification) comparison. Organization Data arrangement by Drag and drop with (View moving rows and immediate transition and hide-all with transition, press manipulation) columns. with instant transition and hide-all with transition. Controlling the view Navigation Scroll, directional arrows, (View of large data sets. directional press, and paging. manipulation)

Table 1: Task-sets and interaction techniques explored during the user study.

Justifications for Conclusions

. . .

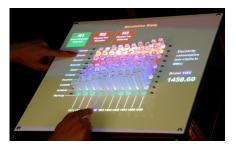

Figure 2: Annotation (Point technique).

Figure 3: Organisation (Drag and Drop technique).

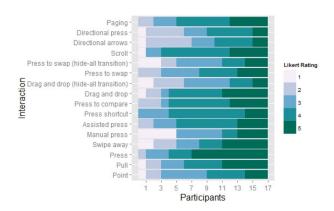

Figure 4: Likert scale ratings for helpfulness of interaction techniques. Range = 1: Strongly Disagree, 5: Strongly Agree.

Limitations and Suggested Further Work

...

Conclusion
